We updated our operating system and now the Cataloging Label Program won't print

Last updated: Thu, 14 Jun 2018 15:18:52 GMT

Symptom

- The label program will not print labels, and instead displays an error message reading "OCLC Cataloging Label Program has stopped working A problem caused the program to stop working correctly. Please close the program."

Applies to

- OCLC Cataloging Label Program

Resolution

The following steps require Admin privileges and may require your IT department's assistance.

This is most likely a permissions issue which can be resolved as follows:

1. Right-click the OCLC Cataloging Label Program shortcut and run it as admin. This creates any missing files.
2. Once the OCLC Cataloging Label Program opens, close it.
3. Right-click the OCLC Permissions software shortcut and run it as admin.
4. If the top six entries in the list do not all say read-write, click the Set Full Permissions button and verify they all change to read-write.
5. Click Close to exit OCLCPermissions.
6. Start the OCLC Cataloging Label Program and print a test label. It should work.

Additional information

Both the OCLC Cataloging Label Program and OCLC Permissions software are available from Cataloging Software Downloads.
