Image display in WorldCat Discovery

Learn about image display in WorldCat Discovery.

Cover art

OCLC does not load cover art for individual titles due to the large volume of titles covered in WorldCat, but instead we load large files from the following providers:

- Baker & Taylor
- Firebrand
- Nielsen
- TiVo

View thumbnails from digital repositories synced through WorldCat Digital Collection Gateway

Collections from CONTENTdm and other OAI-PMH compliant digital repositories which have been synced through WorldCat Digital Collection Gateway will display a thumbnail image in the brief results and detailed view in WorldCat Discovery. For more information on syncing your collection, see Digital Collection Gateway.

- CONTENTdm sites automatically include a thumbnail. If you are using a different OAI-PMH compliant repository, see Use the Digital Collection Gateway, Add a thumbnail image for more information.

<table>

View images from CONTENTdm digital repositories

Engage with images from CONTENTdm digital repositories using OpenSeadragon, an International Image Interoperability Framework (IIIF) viewer.

To qualify for viewer use, the image and CONTENTdm repository must meet the following qualifications:

- Originate from a hosted CONTENTdm site
- Images must be saved with IIIF enabled in the CONTENTdm repository
- Have been synced through Digital Collection Gateway to create a citation in the WorldCat database
- CONTENTdm hosted sites with custom domains must have a valid https certificate on file with OCLC

Click the expand icon on images that qualify for OpenSeadragon viewer use:

Selecting the expand icon will open the image in the OpenSeadragon viewer as a modal. Options in the viewer include:

- Zoom In
- Zoom Out
