Using Folio, create lists of materials targeted at groups of users.

About Lists

This feature allows you to create lists of latest acquisitions, reading lists and so on and make them available in Folio. These will be displayed in the Lists menu:

If you want to group your lists, as in the above example you will need to group your lists into "container" Folders in OLIB Web.

In the above example in Folio, Course Lists is one of the container Folders.

In OLIB Web, the container Folder Course Lists contains several Folders of titles - Business and Finance, Social Care and so on.

Folio can display the Title contents of these Folders. This looks like a standard Folio title hitlist display, but instead it contains the titles within your OLIB Web folder:
This allows you to make course reading lists and latest acquisitions lists easily available through Folio. The lists can be restricted to specific groups of users or made available to all.

**Who can access Lists?**

- Users who are using the specified SSi(s)
- Users who are registered on specified courses
- Users who are registered at specified locations
- Users whose supervisor owns the list
- All users

**Overview**

1. Create course / reading lists folder
2. Create container folder
3. Configure lists on the Folio menu bar
Example: create course lists / reading lists

First you create a list of the books, articles and so on that should be in the Course / Reading List. To do this you create a Folder of title records in the Folders domain:

1. Go to Searches> Folders.
2. Create a new Folder with a **Folder Type** of **Titles**. Enter a meaningful **Folder Name** to identify it, e.g. *Business and Finance*. The **Owner** of the folder defaults to you as the logged in user. Change if required.
3. Search and select the title records into the **Contents** field.
4. Save the details.
5. Repeat the above to create as many Folders of titles as you require - one for each course / reading list.

Example: create a container Folder that contains all the above course / reading list folders

1. Go to Searches> Folders.
2. Create a new Folder with a **Folder Type** of **Folders** and with a **Folder Name** to identify it, e.g. *Course Lists*. The **Owner** of the folder defaults to you as the logged in user. Change if required.
3. Search and select the previous titles folders above (e.g. *Business and Finance*) into the **Contents** field.
4. Continue to insert more titles folders into the **Contents** list until all courses / reading lists are present.
5. Next go to the **OPAC List** sheet.
6. Edit the **Expiry Date** as required. This causes the folder to be deleted at a future date (but not the titles/records in it.) If left null, the default is 5 years.
7. Enter a number in **OPAC List Sequence** that determines the order in which the container Folder appears in Folio's "Library Lists" menu.
8. For example in the **Library Lists** screenshot above, *Course Lists* is number 5 in the list.
9. Using one or more of the following choices will limit who can see the list in Folio's "Library Lists" menu. Restrict who can see the folder list by using the following settings in the **OPAC List** sheet:

<table>
<thead>
<tr>
<th>FIELD</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>For My Students? (Y/N)</td>
<td>Each folder has an Owner. Students can see this folder if the folder is owned by their supervisor. (The user recorded as their supervisor in their user record).</td>
</tr>
<tr>
<td>Public OPAC Interface Numbers</td>
<td>Optionally, if you have more than one Folio interface, enter the interface number(s) separated by a comma. If set to &quot;1&quot; (your Folio interface number), this Folder will be visible to all users.</td>
</tr>
<tr>
<td>OPAC List Courses</td>
<td>Restrict this course to users registered on these</td>
</tr>
</tbody>
</table>
Configure lists on the menu bar

In OLIB Web, create a menu option for the Lists:

1. Go to **OPAC> Configuration Settings**.
2. From **Other Searches**, use **Folio Configuration Settings by Setting** and search for **menu_options**.
3. Open the **menu_options** setting for **catListsMenu**.
4. In **Value2** you can enter a generic name for this menu item, e.g. **Reading Lists, Library Lists**. Encase in double quotes.
5. Set **Include**=Yes.

The new menu item will be available when you next log in to Folio.
Lists display in Folio

- The Lists menu displays along the top of the Folio screen: Library Lists.
- The drop-down menu contains the names of the container folders: Latest Acquisitions, Subject Lists, Course Lists.
- The sub-menu for each container a list of the (courses) title folders: Nursing, Social Care...
- If more levels are desired, container folders can themselves contain container folders. The last level container folder must contain titles folders in order for results to be accessible.

Tip: consider the usability for your end users when adding multiple levels of folders in this way.
This configuration takes effect when you next reload Folio.

Allow end users to create Lists

It is possible to configure Folio to allow end users to save their Basket as a List.

Using in Folio

The logged in user clicks on the Basket icon at the top of the screen as normal, to open the items in it.

In the list of Basket items, they select “Save Basket List” from the Actions drop down
Folio prompts the user to enter a name for the List and to save it.

The new saved list will be added to the first container Folder owned by that user. If a container folder does not already exist, then Folio creates it. The newly saved Basket List folder is added to it as a “contents” Folder.

The new Lists are visible to the user immediately in the “Library Lists” menu:

**Configuration in OLIB Web**

To achieve this, two settings are required:

- A new action_array setting in Folio configuration
- Set the Can Save Lists? field in User Categories

https://help.oclc.org/Library_Management/OLIB/Folio_configuration/Folio_lists

Printed: Sat, 13 Jun 2020 01:32:42 GMT
Create new action_array setting

1. Go to OPAC> Configuration Settings by Setting.
3. Existing actions from g_titles_hitlist are displayed:

<table>
<thead>
<tr>
<th>ID</th>
<th>g_title_hitlist</th>
<th>action_array</th>
<th>Value</th>
<th>Sequence 1</th>
<th>Sequence 2</th>
<th>Can Save Lists?</th>
</tr>
</thead>
<tbody>
<tr>
<td>603011</td>
<td>g_title_hitlist</td>
<td>action_array</td>
<td>&quot;Reserve&quot;</td>
<td>10</td>
<td>1</td>
<td>Y</td>
</tr>
<tr>
<td>603013</td>
<td>g_title_hitlist</td>
<td>action_array</td>
<td>&quot;Add to your eMarked Items list&quot;</td>
<td>10</td>
<td>2</td>
<td>N</td>
</tr>
<tr>
<td>603015</td>
<td>g_title_hitlist</td>
<td>action_array</td>
<td>&quot;Add to a List&quot;</td>
<td>10</td>
<td>3</td>
<td>N</td>
</tr>
<tr>
<td>603017</td>
<td>g_title_hitlist</td>
<td>action_array</td>
<td>&quot;Display in ISBD&quot;</td>
<td>10</td>
<td>4</td>
<td>N</td>
</tr>
<tr>
<td>603021</td>
<td>g_title_hitlist</td>
<td>action_array</td>
<td>&quot;Download MEDIN XML&quot;</td>
<td>10</td>
<td>7</td>
<td>Y</td>
</tr>
<tr>
<td>603044</td>
<td>g_title_hitlist</td>
<td>action_array</td>
<td>&quot;Save search&quot;</td>
<td>10</td>
<td>7</td>
<td>N</td>
</tr>
<tr>
<td>603019</td>
<td>g_title_hitlist</td>
<td>action_array</td>
<td>&quot;Email citations&quot;</td>
<td>10</td>
<td>5</td>
<td>Y</td>
</tr>
</tbody>
</table>

4. Click New Record to create a “Save Basket List” action as follows.
   i. Set Value = e.g. "Save Basket List" (NB double quotes).
   ii. Set Value 2 = 8.
   iii. Set Sequence 1 = 10 (Should match the Sequence 1 value of the sibling action_array items).
   iv. Set Sequence 2 to wherever you want this action to appear in the drop down list (in the above example array, 10 would add the action to the end of the list).

Set Can Save Lists? for relevant User Categories

2. Search for the user categories whose linked users should be able to create Lists.
3. Set Can Save Lists? = Yes.

This configuration takes effect in Folio immediately.
