How can I tell if our EBSCO collection is correctly set up to automatically load eBooks?

Last updated: Thu, 27 Feb 2020 19:32:52 GMT

Applies to

- WorldShare Collection Manager

Answer

To tell if your collection is automatically loading eBooks, you can look at the collection history.

**NOTE:** this information below ONLY pertains during setup and initial configuration. Once feed is in place this screen will change and you'll need to contact OCLC Support.

Navigate to **Metadata > Collection Manager** and, search for the collection. After selecting the collection, you can scroll down to history to view the actions that have been taking place on that collection. The **source** and the **action** field in the activity history will show you if this is on an automatic feed. They should contain the provider's name.
