Can I customise my CONTENTdm website to match the look and feel of our existing public website?

Last updated: Wed, 02 Jan 2019 02:38:37 GMT

Applies to

- CONTENTdm

Answer

- A website configuration tool is provided for branding and tailoring the appearance and behavior of key elements of the CONTENTdm website and collections. Most of this configuration requires no programming skills
- This tool enables you to:
  - Configure your site by setting default values
  - Enable or disable components
  - Choose colors, fonts and styles
  - Describe your website and collections
  - Optional modular customizations including custom pages, custom CSS or custom scripts require some programming skills

You can configure your website with appropriate permissions set in CONTENTdm Administration:

- At a global level: the default for the website. If no settings are created, then the website will use the default settings
- At a collection level: Will affect only one collection. Any configurations set for a collection will override the global configurations

Additional information

- See information on how to use the website configuration tool
- See information on customising the website
