Why don't the results match between the A-Z Link Resolver and the WorldCat knowledge base when searching by journal title

Last updated: Thu, 25 Apr 2019 17:09:07 GMT

Symptom
- You see more titles in the WorldCat knowledge base for a journal than in the A-Z Link resolver when searching by title

Applies to
- WorldCat knowledge base
- A-Z Link Resolver

Resolution
The A-Z Link resolver groups journals by ISSN while the WorldCat knowledge base shows all links immediately on their own line. To see the additional links in the A-Z Link Resolver you have to click on the journal title.
