When my patrons register and go to the Change User Information pages, I only want one state to show up for the option of state

Symptom
- You have patrons selecting the wrong state and the only option you want is the state that you are in to show up

Applies to
- ILLiad

Resolution
Because the Web Pages pull their data from the CustomDropDown table in the Customization Manager, you would need to remove all the states from the table except for your state. This would also mean that no one could show any other state than your state.
