Why is DCG failing our repositories ListSets?

Symptom

- ListSets are failing, resulting in a single collection called "Entire Repository"

Applies to

- Digital Collection Gateway

Resolution

The culprit is most likely that you are using an ampersand in the description of one of your collection. DCG cannot process this, causing the ListSets to fail. You will need to replace the ampersand with an 'and' and re-run the repository in order for it to pass.
