Discover how to update the permanent shelving location (852 $c), depending on the branch (852 $b), in the LHR. You can move items within your branch to a new permanent shelving location.

1. Navigate to **Record Work Lists > LHR** and then click the **Record Work List ID** for which you want to update the permanent shelving location.
2. From the LHR - Record Work List screen, select **Base Script** from the Edit Action drop-down list.
3. Select **Update Permanent Shelf Loc** from the Script Name drop-down list.
4. Select your branch from the For Records with this Branch drop-down list.
5. Select a **New Permanent Shelving Location** from the drop-down list.
6. Select the **LHR record(s)** for which you want to update the permanent shelving location.
   - Note:
     - To select all records on the current page of results, select the **check box** at the top of the table.
     - To select all records in the work list, click **Actions > Edit > All Target Records**.
7. **(Optional)** Preview selected records with the script change.
   a. Select up to 25 records to which you want to apply the script change.
   b. Click **Actions > View Selected Record(s) > Preview Record(s) after Edit Action Applied**. The View LHRs - Preview Record(s) after Edit Action Applied screen displays the selected records with the script change applied and includes any validation errors.
   c. Click **View Current Record(s)** to view the selected records in their current state. From the View LHRs - Current Record(s) screen, click **Preview Record(s) after Edit Action Applied** to return to the View LHRs - Preview Record(s) after Edit Action Applied screen.
   d. Once you have confirmed the script changes appear as expected, click **Go Back**.
   e. **(Optional)** Select a different set of records (up to 25) and repeat steps a through d.
8. Click **Actions > Edit > Selected Target Records**.
9. Click **Apply** in the Apply LHR Script to Selected Record(s) dialog window. The script running process is asynchronous. The time it takes to run varies depending on how many records you are editing. While the process is running, you can perform other actions in Record Manager outside of the LHR tab in the Record Work Lists screen.

   A confirmation message appears identifying how many records successfully updated or failed to update when the script has finished running.

**Find a failed record**

If a record failed to update, the confirmation message provides a status.

To locate the failed record:
1. Select **Included Status(es)** from the Filter by drop-down list.
2. Select the **status of the failed record** from the drop-down list.
3. Click **Apply Filter(s)** to locate the failed record.
