The database I want to set up for the search box feature does not appear in the drop-down list.

Last updated: Wed, 09 Oct 2019 17:14:45 GMT

Symptom

- The first step is to select a database or group of databases from the drop-down list to include in your search box. If a database I want to use is not in the list, then what?

Applies to

- WorldCat Discovery

Resolution

The available databases are the same as those set up in the Metasearch content module. If what you want is not available, please update it there first.

Additional information

More information about the Metasearch content module is available.
