If a patron changed their password recently and I change the password complexity requirement, will the patron have to change their password again?

Symptom

- You want to know if the password complexity requirement will make all patrons change their password after you make the change

Applies to

- ILLiad

Resolution

Here is how the Password Changed Date and the User Password complexity work together:

1. When your patron reset their password, the field in the Users table called Password Changed Date updates with the date that it took place.
2. If you set the UserPasswordExpirationDays with 180, then that means ILLiad will not look to request the password change until 180 days after the last time the Password Changed Date field is filled in.
3. After the 180 days pass by the patron will be asked to change their password with the new complexity.
