Getting an error message “Can’t initialize the OCLC macro language” when trying to run a local macro

Symptom

- Can’t run a macro, getting this error message, "Unable to initialize the OCLC Macro Language."

Appears to

- Connexion Client

Resolution

1. As a test, pull up a record click **Tools > Macros >** in the OCLC box
2. Select **Add&Edit 007**
3. Click **Run**.

If the Add/Edit dialog box appears and you do not get the error message this will prove the issue is with your local macros, and not the OCLC macros. To fix run a recompile on your macros. Select the **Macro > Generate > Edit**, click the checkmark and the message will appear on the bottom left of the screen to let you know if the recompile was "successfully completed." If it was not successful then the macro is corrupted, and needs to be uninstalled and reinstalled.

If you get the same error message with the OCLC macros and your local macros we suggest that you have your IT department uninstall and then reinstall Connexion Client on your workstation.
