Can you have two instances of the client on the same machine pointing to a different server?

**Question**

- Can you have two instances of the client on the same machine pointing to a different server?

**Applies to**

- ILLiad

**Answer**

Yes. Set the SQL Alias Manager alias to Default for each one when using that specific instance. Also, both instances will need to be on the same version of ILLiad. So if one is v8.7.3 and one is 9.0.3, they cannot both work pointing to different servers.
