Why are Title URLs missing from the KBART?

Last updated: Thu, 02 Apr 2020 17:59:16 GMT

Applies to

- WorldShare Collection Manager

Answer

Not all of our providers use unique links for each of their titles. Many use a link key, which will be at the end of the URL, to link to unique items. This allows a single URL to be used for the entire collection rather than each title having a unique URL. Because of this setup, the KBART will not pull any title URLs from the collection.

Additional information

You can verify this is such a collection by looking for the linking key at the bottom of the title-level detail of a title in the collection.
