Resolution

Here is what ISO is in ILLiad:

1. It is a protocol to send and receive ILLiad requests.
2. Just like some come through OCLC or through Rapid, ISO is another one some sites use.
3. For you to use it, you would need to make sure it is installed following the New Procedure for Updating ISO in ILLiad 9.1
4. Also, ISO ILL has to be enabled in the ILLiad Customization Manager
5. And the ILLiad ISO Service needs to be turned on in the Web Server Services.
6. You would also have the ILLiad ISO Manager service turned on.
7. More information can be found in the ISO ILL documentation.
