Error received when exporting with Connexion browser to a Local system, "An error occurred while attempting to make a connection to your local system"

Symptom

• Export fails, the member receives the error "An error occurred while attempting to make a connection to your local system" when settings are correct.

Applies to

• Connexion browser

Resolution

Short introduction or instructions to follow these steps:

1. After checking host, port, filename, and record export settings are correct. Delete the hostname and port and extra spaces and re-add the settings back.

Additional information

Extra characters in the settings are causing an issue, making the settings incorrect.
