In order to provide access to resources that use https, your EZproxy server must be configured with an SSL certificate.

**November 2016:** The JAMA Network has simplified its URL patterns in a platform redesign. After updating any Starting Point URLs referencing legacy subdomains (e.g. archderm.jamanetwork.com), you may remove those lines from your existing stanza. Redirects are in place from such URLs to the new platform.
Additional information about JAMA URL patterns is available at the [JAMA Network](https://help.oclc.org/Library_Management/EZproxy/Database_stanzas/JAMA).
