DOI System

2016-05-09

In order to provide access to resources that use https, your EZproxy server must be configured with an SSL certificate.

The DOI (Digital Object Identifier) System is used when mapping a DOI name (e.g., 10.1000/182) into a DOI link (e.g., http://dx.doi.org/10.1000/186) which is mapped through the DOI System to the content it represents (e.g., a particular journal, volume, article). A variety of database vendors use DOI links to provide links to content that may be contained in other databases hosted by any number of database vendors.

Title DOI System
URL https://doi.org
Host https://doi.org
Host dx.doi.org
Host https://dx.doi.org
Domain doi.org
