Learn how to use the CookieFilter config.txt directive in EZproxy to specify the name of a cookie that should be blocked from passing through to remote web servers. **CookieFilter** specifies the name of a cookie that should be blocked from passing through EZproxy to remote web servers. **CookieFilter** is typically used in environments in which an application on a separate server in the same domain sets a domain-based cookie which is being "seen" by the EZproxy server, but which should not be forwarded on to any remote web servers. For example, a local cookie with a value that coordinates single sign-on across multiple servers.

**CookieFilter** is a repeatable, position-independent config.txt directive.

**Qualifiers**

<table>
<thead>
<tr>
<th>QUALIFIER</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>The name of the cookie to block.</td>
</tr>
</tbody>
</table>

**Syntax**

```plaintext
CookieFilter name
```

**Examples**

Block the cookie named SomeLocalCookie from passing through EZproxy.

```plaintext
CookieFilter SomeLocalCookie
```
