To establish single sign-on support between EZproxy and Skillport, add the following line to config.txt:

```
SSO -Secret={secret} -HASH=SHA256 -URL={url} skillport
```

The `secret` and `url` values are provided by Skillsoft.

Example:

```
SSO -Secret=this isa24 character secret -HASH=SHA256 -URL=https://ezproxytest.skillport.com/skillportfe/ezproxy/ezproxy.action skillport
```

After adding this line, the following URL will provide access to Skillport, substituting your institution’s EZproxy domain name:

```
https://proxy.library.edu/sso/skillport
```
